

LIVING STONES

common law - common humanity - common sense

Some good news! This is **Foster Gamble** who you may know from the **Thrive** movement. He reports on how **Tennessee** have passed a bill forbidding chemtrails, the adding of mRNA vaccines into food, banning biological men in women's sports and brought in David Webb to address the state government on how to avoid 'The Great Taking' legislation in their state which is about how to prevent banks taking your money in the event of a default. David Webb revealed how the legislation is already in place for banks to take all our money (as *happened in Cyprus a few years ago*). Anyway, there was heavy voting against it and other states are following. In **Louisiana**, they've passed a bill to stop the WHO pandemic treaty and in **Florida** they've halted the covid vaccines. He goes on to say how this is all an example of a bigger movement of humanity taking back their power against tyranny. It's happening in various places, though if you only watch mainstream news you'd never know.

There was a report out today (*Sunday 14th*) by **Dr. John Campbell** about studies from **Japan**, who have some of the most meticulous studies available and on a huge population (*over 200 million*), that point to harm from the covid vax. So, it's all coming to the surface and hopefully, in time to prevent the tyrants from releasing the next pandemic or the big cyber-attack.
